DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. JP 10-040834 (Takashi et al.).

Takashi discloses a transparent conductive layered structure comprising a transparent substrate and a transparent two-layered film being composed of a transparent conductive layer and a transparent coat layer being formed in succession on the substrate (see paragraphs 0008 and 0009 of translation). The transparent conductive layer in the reference comprises as its main components, conductive microparticles having a mean particle diameter of 200 nm or less and a binder matrix of silicon oxide (see paragraphs 0009 and 0017 of translation). The transparent coat layer in the reference comprises as its main component, a binder matrix of silicon oxide including one or more types of alkyl groups and may be selected from long chain alkyl groups containing 10 carbon atoms (see paragraph 0022 of translation). Takashi further discloses that the conductive particles may be indium tin oxide or antimony tin oxide (see paragraph 0009 of translation).
